1.配置 SQL,运行 create 程序

2.打开 IDL,命令行输入 **dd_objworld21.** *BAT* 编译程序,按运行按钮

3.按 NEW,导入病人数据

数据导入进度条

4.数据导入并重建

5. 按 Modify 按钮,对数据进行操作

7.右键按点,分别为红绿蓝三色的三个点,左下角分别显示两条线的长度及中间夹角

6.左键拖动,进行旋转操作

8.将测量得到的数据传输到表格

	left ZGG	right ZGG	
3	0.00	0.00	_^
4	11.45	0.00	
5	0.00	0.00	
6	0.00	0.00	
7	0.00	0.00	~

9.拖动颜色条,改变颜色

10.拖动透明度滑条,改变透明度

11.切割画出 ROI

12. 三维显示切割后的图像数据

13.换方向继续切割

14.改变数据显示阈值

斜切透明

斜切

点击选择 split 按钮,对三维图形进行斜切割,模型将会用两个不同的颜色模拟切割效果。 勾选 Transparency,红色部分将变为透明,可以通过移动观察到另一半的内部结构。

斜切

点击选择 split 按钮,此时只有左侧的 x,y,z 三个进度条可以选择,通过改变三个进度条的数值,从而确定 x,y,z 三个数值形成的一个平面,对三维图形进行斜切割。相当于一个斜的平面将三维模型一分为二。

直切

点击选择 clip 按钮,此时通过改变六个进度条的数值,从而移动 x,y,z 三个坐标上的六个面(x,-x,y,-y,z,-z)对三维图形进行切割。相当于竖直的六个平面切割
